Book Reviews and Testimonials

"I would like to commend you for writing a book to help people perform their jobs better. Most academics write books to impress, rather than to educate. Your book **Environmental Audits** is clearly an impressive instructional text and an excellent source of useful information. Thanks again..."

"It is difficult to imagine the bookshelf of any environmental auditor or environmental auditing organization without at least one well-worn copy of Larry Cahill's **Environmental Audits**. Mr. Cahill gives us a highly readable, highly relevant, comprehensive, and conceptually sound book full of both perspective and practical advice. This is a good book. A classic in the field."

"I must declare my bias and say that I make extensive use of Cahill's book when carrying out environmental audits and teaching environmental auditing. ... [The 8th Edition of **Environmental, Health & Safety Audits** should be on the shelf of every HS&E Manager. Not because they necessarily do audits but because there is so much source material and practical experience. It can be a source book for solving management problems as well as sorting out staff issues. Thoroughly recommended."

"Overall, **Environmental, Health and Safety Audits, 8th Edition** is a very useful textbook offering a generic approach to environmental audits which can easily be expanded to health, safety and security issues. The author does a very thorough job in discussing the activities and protocols involved with the 3 phases of the auditing process: 1. Pre-audit Phase; 2. On-site Audit Phase; and 3. Post-Audit Phase. The textbook utilizes the input from several different authors which results in some duplication of information, but repetition is good in this much changing field."
