

Internal audit's role in sustainability

November 6, 2012

The Capital Hotel

St. John's, NL

Session Overview

The business impact of sustainability is complex, and risks vary by sector and geographic scale. Audit Committees and management are coming under increasing pressure from stakeholders, shareholders and regulators to explain how sustainability drivers impact their organizations. Internal audit is well positioned to educate Audit Committee members and management on emerging environmental, social and governance risks and to improve Board of Director ability to exercise its risk oversight responsibilities. This session will define sustainability, identify common standards and frameworks, approaches to identifying sustainability risks, and where internal audit can play a role in sustainability within organizations.

2.0 continuing professional education credits will be awarded to attendees of this session.

Featured Speaker

DAVID GREENALL

David Greenall is the Atlantic practice leader for Deloitte's Sustainability services. David brings 17 years of experience assisting clients in the energy, mining, power & utilities and public sectors with environmental and sustainability projects focused on governance, strategy, risk management, internal controls, project management and performance assessment. David is a frequent speaker on sustainability topics and recently presented on this topic during the September 2012 IIA Canada National Conference.
