## ATM FRAUD

LOOK OUT FOR DEVICES LIKE THESE AT ATMs

**CAMERA**

**SKIMMER**

- 1 The concealed micro camera is used to observe PIN entry and the skimming device copies the data stored on the magnetic stripe.
- 2 An example of a skimming device. The device is fitted over the genuine slot to obtain the information encoded on a card's magnetic stripe.
- 3 A further example of a skimming device. Readers' manufacture the device according to the ATM model.
- 4 A card-trapping device allows the cardholder to insert their card in the normal way but prevents the card from being ejected - trapping it in the machine.

5 An example of a false front created by the fraudster to cover the genuine card and receipt slots. This is used in conjunction with a concealed pin-hole camera.

6 A piece of metal or plastic is painted the colour of the machine and conceals a pin-hole camera. This is used in conjunction with a skimming device.
