# ABOUT GLOBAL RISK IN FOCUS

## Know Your Risks. Plan Strategically.

Risk in Focus is the Internal Audit Foundation's premier annual initiative to identify the five most significant risks impacting the world.

Learn what internal auditors are saying about the:

- Five highest risks in their region
- Five top priorities for internal audit effort
- Key considerations for boards and audit committees

Risk in Focus uses survey results, regional roundtables, and interviews with local experts to reveal key insights from the unique perspective of internal auditing.

The [Internal Audit Foundation](#) gratefully acknowledges the work of IIA National Institutes and IIA regional bodies that make this research possible: African Federation of Institutes of Internal Auditors ([AFIIA](#)), Arab Confederation of Internal Auditors ([ARABICIA](#)), Asian Confederation of Institutes of Internal Auditors

([ACIIA](#)), European Confederation of Institutes of Internal Auditors ([ECIIA](#)), and Fundación Latinoamericana de Auditores Internos ([FLAI](#)).

Special appreciation goes to the European Institutes Research Group (EIRG), which developed the Risk in Focus research approach in 2016 and continues to publish the report for Europe through the [ECIIA](#).

All reports and board briefings are free to the public:

- Africa
- Asia Pacific
- Europe
- Latin America
- Middle East
- North America
- Global Summary

interviews

# GLOBAL SURVEY PARTICIPATION

## GLOBAL TOTALS

**3,285** respondents  
**132** countries/locations

## Survey Methodology

Survey responses were received from 3,285 chief audit executives and directors representing 132 countries and locations. The Internal Audit Foundation hosted the survey online from March 24 to May 6, 2026, for all regions except Europe. The survey for Europe was conducted by the European Institutes Research Group from March 2 to April 7, 2026.

# EXECUTIVE SUMMARY

## Risk Volatility Drives Changes in Audit Activities

**While risk volatility is virtually assured in the current geopolitical, economic, and digital landscapes, audit leaders are monitoring these rapid changes and tailoring their activities to address the areas of greatest impact for their organizations.**

Based on the 2026/2027 North American survey, the three highest risk areas facing survey respondents' organizations were:

- **Cybersecurity.** Cybersecurity remained entrenched as the most cited risk in North America with 85% of respondents ranking it as a Top 5 risk, with little change compared to the prior year (Exhibit 1.1).
- **Digital disruption.** Digital disruption (including AI) boosted its risk ranking 16 percentage points over last year, to reach an all-time high (Exhibit 1.2). Digital disruption is increasingly viewed as pervasive in its influence over other risk categories.
- **Human capital.** CAEs cite AI as a key factor for this risk area, as organizations face challenges with incorporating AI into their human capital strategy.
- **Geopolitical uncertainty.** Political change remains a top risk in North America, cited by 43% of respondents, after the dramatic increase in the prior year.
- **Regulatory change.** Even though risk ratings for regulatory change fell substantially, this traditional audit area is still considered high risk for North America.

### New strategies

Internal audit functions are adapting new strategies to respond to emerging risks, but much effort continues to be allocated to traditional audit areas.

- **AI focus increasing.** Digital disruption is taking a larger portion of internal audit's focus in North America, more than doubling in the past four years (from 25% to 53%) (Exhibit 2.2). Audit functions are incorporating AI into internal audit activities in order to increase efficiency and enable continuous monitoring.
- **Political impact monitored through reviews of related risks.** Audit leaders are monitoring and planning for geopolitical impacts on supply chain, regulatory change, business resilience, finances, and market changes.
- **High emphasis on compliance.** A large part of internal audit's priorities remains on compliance work. Governance/corporate reporting and regulatory change remained among the Top 5 areas where internal audit spends most of its time and effort.

Finally, internal audit coverage and risk governance maturity are important to consider together, especially for emerging risks. Of greatest concern are high-risk areas that fared poorly for both governance maturity and audit coverage, specifically digital disruption and geopolitical uncertainty.

## NORTH AMERICA RESEARCH PARTICIPATION

**232** survey responses

**9** countries/locations\*

**2** roundtables

**3** in-depth interviews

## PROJECT SPONSOR

\* Responses were primarily from the U.S. and Canada. English-speaking countries from the Caribbean are also included.

# 1. RISK ENVIRONMENT

## Technology and Political Change Shape the Risk Landscape

Cybersecurity and digital disruption dominated the Top 5 risk rankings in North America, with digital disruption rising 16 percentage points over the prior year (Exhibit 1.2).

Human capital, geopolitical uncertainty, and regulatory change rounded out the Top 5 highest ranked risks, with market changes/competition coming in a close sixth (Exhibit 1.1).

Notably, respondents listing fraud as a Top 5 risk rose from 11% to 18% (Exhibit 1.2).

### Recognizing risk displacement

Exhibit 1.1 provides a useful comparison between Top 5 risk rankings and risk severity rated on a scale of 1 to 7. It is particularly helpful in recognizing the impact of choice displacement, where some risks drop in the Top 5 risk ranking as more urgent, emerging risks take their place. For example, while 29% of respondents ranked business resilience as a Top 5 risk, nearly half (47%) rated the risk severity as high, very high, or extremely high. Similarly, 33% of survey respondents ranked supply chain as a Top 5 risk, but nearly half (47%) rated the risk severity as high, very high, or extremely high.

# RISK ENVIRONMENT

## Exhibit 1.1. North America – Top 5 Risks vs. High Risk Severity

Survey question 1: What are the Top 5 risks your organization currently faces? (Choose 5.)  
Survey question 2: On a scale of 1 to 7, please rate the current level of risk at your organization for each of the following risk areas.

**How to Interpret the Graph**  
**Dark colors** show who picked the risk as one of the 5 highest at their organization (Top 5 risk). **Light colors** show who rated the risk as a 5, 6, or 7 on a scale of 1 to 7 (high risk severity). **Orange** indicates the five highest ratings for both risk measures.

Note: Risk in Focus survey conducted online worldwide from March 2 to May 6, 2026. n = 232 for North America.

# RISK ENVIRONMENT

## Digital disruption's impact on other risks

Practitioners and subject-matter experts point to AI adoption rates outpacing supporting governance as a major driver of concern as well as persistent apprehension about internal audit's ability to provide effective risk assurance and advisory services in this risk area. Over a four-year period, risk ratings for digital disruption rose from 36% in 2023 to 69% in 2026.

Audit leaders are increasingly attuned to the effects of digital disruption on other risk areas, including cybersecurity, supply chain, third-party risk management, fraud, human capital, and business resilience.

AI is fundamentally changing cybersecurity itself. AI is increasingly enabling more sophisticated phishing, impersonation, and automated attacks, and changing how organizations detect and respond to threats. AI is a key driver of cybersecurity risks.

But AI's impact doesn't stop at cybersecurity. For example, a roundtable participant commented that software supply chain risk is particularly high for financial institutions. Brian Tremblay, an audit leader at a major defense contractor, warned that supply chain risk has evolved over time to include, and in some cases be dominated by, software, which many companies may not appreciate or even realize.

Similarly, third-party vendors face digital disruption risks, and that risk is passed along to their clients. Indeed, the concentration of risks with third and fourth parties, especially when it comes to data warehousing, should be of concern, another financial services audit leader noted.

Roundtable participants said the growth in digital disruption risk is impacting human capital risk, as well. "The AI emergence is making the human capital risk even greater," said the head of internal audit at a publicly traded energy company. "Concerns by employees about job loss, concerns about how to train and upskill, I think it's injected a lot of complexity into that space."

From the internal audit staffing perspective, the head of internal audit at a privately held public amenity in Canada noted that attracting data engineers and AI specialists has become nearly impossible for mid-size private companies.

## Fraud

Fraud rankings jumped 7% year over year in North America, reflecting both increased incidents of AI-supported fraud and pressure on public sector auditors in the U.S. to crack down on fraud in federally funded social support programs.

"We're seeing it's easier to clone an invoice, create a supplier, fake a video call, fake an executive calling to authorize an invoice," a financial services audit leader at one roundtable said. "The voice spoofing is getting quite good."

A higher education audit leader in Minnesota said she doesn't feel fraud is any worse in her state than elsewhere around the country, "but it's just a real focus here. It's in the newspapers almost every day."

Another public sector auditor stated plainly, "We're getting a message from the federal government all the way down to our individual organizations: we need to prioritize fraud."

# RISK ENVIRONMENT

## Exhibit 1.2. North America – Top 5 Risks Trend

Survey question: What are the Top 5 risks your organization currently faces? (Choose 5.)

| 2023       | 2024       | 2025       | 2026       | Change from 2025 to 2026 | Change     | Risk areas                               |

| 36%        | 41%        | 46%        | 29%        |                          | -17        | Business resilience                      |
| 28%        | 28%        | 27%        | 24%        |                          | -3         | Financial/liquidity                      |
| <b>9%</b>  | <b>9%</b>  | <b>11%</b> | <b>18%</b> |                          | <b>+7</b>  | <b>Fraud</b>                             |
| 21%        | 20%        | 18%        | 16%        |                          | -2         | Communications/reputation                |
| 21%        | 20%        | 20%        | 16%        |                          | -4         | Organizational culture                   |
| 16%        | 16%        | 15%        | 14%        |                          | -1         | Governance/corporate reporting           |
| 17%        | 13%        | 8%         | 11%        |                          | +3         | Health/safety                            |
| 12%        | 13%        | 7%         | 7%         |                          | 0          | Climate change/environment               |
| 8%         | 8%         | 7%         | 7%         |                          | 0          | Mergers/acquisitions                     |

■ Increased risk compared to prior year    ■ Decreased risk compared to prior year

### How to Interpret the Graph

**Orange** text indicates an increase of 4 percentage points or more compared to the prior year. The **orange** and **blue** bars show the difference in ratings from 2025 to 2026. The column labeled “change” shows the percentage point difference from 2025 to 2026.

Note: Risk in Focus survey conducted online worldwide from March 2 to May 6, 2026. n = 232 for North America.

# RISK ENVIRONMENT

## Geopolitical impacts

Geopolitical uncertainty remains one of the five highest risks after its rapid rise in the prior year (43%). In addition, on February 28, 2026, the U.S. and Israel initiated a joint attack against Iran, which led to Iran blockading maritime supply routes, volatile oil prices, and attacks against U.S. allies in the Middle East.

These geopolitical developments likely contributed to high supply chain risk for publicly traded (51%) and privately held (63%) organizations (Exhibit 1.3). In contrast, financial services, public sector, and nonprofit organizations report much lower geopolitical uncertainty risk (below 40%) (Exhibit 1.3).

Global politics are also having an impact on cybersecurity. More than 6 in 10 organizations said that geopolitically motivated cyberattacks – such as disruption of critical infrastructure or espionage – must be considered as part of their cybersecurity strategy, according to a [World Economic Forum](#) survey. What's more, 91% of the largest organizations report changing their cybersecurity strategies because of geopolitical volatility.

## Business resilience

Several audit leaders worried that the sharp decline in ranking for business resilience, down 17 percentage points year-over-year, could be misleading. The drop likely reflects choice displacement. What's more, some audit leaders noted that business resilience risk is absorbed into other higher ranked risks, such as cybersecurity and digital disruption. Still others noted that the pandemic and other disruptions in the past

decade have tested and matured business continuity planning, making business resilience less novel. “We’ve lived it and survived it,” one financial services audit leader said.

Notably, the public sector was higher in its ranking of business resilience than the North American average (42% vs. 29%) (Exhibit 1.3). This may reflect concerns about changing federal funding priorities and a shrinking federal workforce, which lost approximately 250,000 workers from December 2024 to January 2026, according to the [U.S. Government Accountability Office](#) (GAO).

## Regulatory change

Another risk area that experienced displacement in North America was regulatory change, falling 9 percentage points and dropping to fifth place (Exhibit 1.2). This may be due to risk displacement from urgent emerging risks, accompanied by a trend toward deregulation from the current U.S. presidential administration.

# RISK ENVIRONMENT

## Exhibit 1.3. North America – Top 5 Risks per Sector

Survey question: What are the Top 5 risks your organization currently faces? (Choose 5.)

| Risk areas                             | All North America | Financial services | Publicly traded | Public sector | Privately held | Nonprofit |
|----------------------------------------|-------------------|--------------------|-----------------|---------------|----------------|-----------|
| Cybersecurity                          | 85%               | 92%                | 85%             | 81%           | 88%            | 78%       |
| Digital disruption (including AI)      | 69%               | 82%                | 76%             | 46%           | 58%            | 61%       |
| Human capital                          | 45%               | 49%                | 42%             | 54%           | 29%            | 33%       |
| Geopolitical/macroeconomic uncertainty | 43%               | 37%                | 61%             | 25%           | 63%            | 28%       |
| Regulatory change                      | 42%               | 44%                | 37%             | 48%           | 21%            | 67%       |
| Market changes/competition             | 41%               | 51%                | 58%             | 12%           | 29%            | 50%       |
| Supply chain and outsourcing           | 33%               | 24%                | 51%             | 10%           | 63%            | 39%       |
| Business resilience                    | 29%               | 30%                | 17%             | 42%           | 29%            | 11%       |
| Financial/liquidity                    | 24%               | 25%                | 8%              | 37%           | 17%            | 44%       |
| Fraud                                  | 18%               | 27%                | 8%              | 23%           | 17%            | 6%        |
| Communications/reputation              | 16%               | 11%                | 8%              | 38%           | 4%             | 17%       |
| Organizational culture                 | 16%               | 10%                | 8%              | 25%           | 21%            | 33%       |
| Governance/corporate reporting         | 14%               | 8%                 | 10%             | 27%           | 17%            | 6%        |
| Health/safety                          | 11%               | 0%                 | 7%              | 25%           | 17%            | 22%       |
| Climate change/environment             | 7%                | 4%                 | 10%             | 8%            | 17%            | 0%        |
| Mergers/acquisitions                   | 7%                | 7%                 | 12%             | 0%            | 13%            | 6%        |

■ 5 highest risks

Note 1: Ties for fifth place are highlighted in a lighter shade.

Note 2: Risk in Focus survey conducted online worldwide from March 2 to May 6, 2026. n = 232 for North America.

## KEY POINTS

### Survey insights

- Cybersecurity dominates risk rankings and holds first place, with 85% citing it as a Top 5 risk.
- Digital disruption risk rose significantly (+16) and is now ranked as the second highest risk.
- Geopolitical/macroeconomic uncertainty risk remains high, ranked fourth overall, with particularly high ratings among for-profit industries outside of financial services.
- Fraud risk increased by 7 percentage points in 2026 to 18%. Fraud risk rating has doubled since 2023.

### Internal audit strategies

- Look for impacts from digital disruption and geopolitical uncertainty on other risk areas, including cybersecurity, business resilience, supply chain, third-party, and financial/liquidity.
- Expand thinking on supply chain risk to include software.
- Reassess third-party risk in an AI context and look for heightened vulnerabilities, particularly in data warehousing and cloud services.

## 2. INTERNAL AUDIT PRIORITIES

### Audit Effort Focuses on Cybersecurity, Compliance, AI

**Cybersecurity continues to dominate audit priorities, with 84% of respondents including it as a Top 5 area where internal audit spends the most time and effort, nearly matching its Top 5 risk score of 85%.**

Regulatory change is ranked a distant second, with 54% saying it is a Top 5 audit priority. Digital disruption had the largest increase for audit priority out of all the audit areas – up 9 percentage points – bringing it to third in the ranking at 53%. Other areas where internal audit increased its efforts were fraud and human capital (+5) (Exhibits 2.1 and 2.2).

#### Cybersecurity efforts evolve

Cybersecurity is evolving. Instead of traditional perimeter-focused concerns, cybersecurity encompasses AI-enabled threats, software supply chain vulnerabilities, third-party ecosystems, cloud environments, cyber resilience, and increasingly sophisticated [geopolitical cyberattack campaigns](#). This evolution supports a broader internal audit focus beyond traditional technical controls to areas such as cyber resilience, third-party ecosystems, AI-enabled security, and governance over emerging technologies.

#### AI effort continues to increase

Audit effort has continued to increase for digital disruption, reflecting persistent concerns about internal audit's ability to provide effective assurance over AI. Those listing it as a Top 5 audit priority have more than doubled (from 25% in 2023 to 53% in 2026). No other

risk area remotely matches this acceleration (Exhibit 2.2). However, it's important to note that public sector functions are not included in this shift, with only 25% saying that digital disruption is one of their Top 5 audit priorities (Exhibit 2.3).

Although there is high audit priority for digital disruption in most sectors, the effort may reflect concern rather than confidence, according to roundtable participants.

"I think part of this might be that everyone thinks, 'Okay, I've got to do something in AI or this digital disruption space, or we're going to lose the company,'" one financial services audit leader said. "Internal auditors are saying, 'I need to go out there and audit something to help get us moving.'"

Shaun Kirby, who recently became CAE at Cumberland Farms and previously led the audit function at a semiconductor company, noted that effort considerations must include internal audit's use of AI in its work. He views AI as a tool that will shift audit from backward-looking to forward-looking through continuous monitoring. "What does that look like three to five years down the road?" he asked. "I wish I had a crystal ball."

One private sector auditor offered an amusing but potentially prescient observation on the internal audit/AI relationship: "We have this phrase in our department," she said. "AI or IA? Who is watching who?"

**"We have this phrase  
in our department.  
AI or IA? Who's  
watching who?"**

**– Roundtable comment**

# INTERNAL AUDIT PRIORITIES

## Never-ending cybersecurity battles

Despite high effort toward cybersecurity, audit leaders worry they are falling behind, particularly given the influence of AI. Many simply don't have the resources or in-house expertise to keep up. Tremblay summed up the concern of audit leaders at the two roundtables: "To actually audit cybersecurity well would take an army, and an unfathomable budget, given the attack surface," he said.

Best practices in this area include prioritizing upskilling of audit staff, focusing on IT/cyber skills for new hires, and outsourcing. Another consideration is to work with IT and information security experts to leverage AI products to support cybersecurity by automating real-time threat detection, identifying network anomalies, and accelerating incident response. Governance best practices include ensuring that human oversight, security, and training regimens are part of any AI-enhanced cybersecurity strategy.

While it is important and necessary to build deeper skillsets within the audit function, internal auditors do not necessarily need to have the skills to fully perform first- or second-line cybersecurity. As noted in the [Three Lines Model](#), internal audit's role is to provide assurance and advisory services.

## Geopolitics and related efforts

While auditors focused their efforts primarily on cybersecurity, AI, and compliance, other highly ranked risk areas received less audit attention. As shown in Exhibit 2.1, there was a 30-percentage-point gap between risk ranking and audit priority for market changes/

competition (41% vs. 11%). The gap was even greater (37 percentage points) for geopolitical/macroeconomic uncertainty (43% vs. 6%).

Roundtable participants said some gaps may be explained by the difficulty in directly auditing risk areas external to the organization, such as geopolitical uncertainty. However, its impact on internal risk areas can be monitored. Risk areas, including supply chain, financial/liquidity, and market changes/competition, can be influenced by wars, market instability, and international friction.

This was noted in supply chain audit priority ranking much higher than the regional average (34%) for publicly traded (51%) and privately held (71%) organizations, which are likely to rely more heavily on global resources to do business (Exhibit 2.3).

Additionally, audit coverage for some risks might be addressed in other risk areas. For example, financial/liquidity audit efforts could cover aspects of both market changes/competition and geopolitical uncertainty. Similarly, business resilience audit efforts could address aspects of geopolitical uncertainty.

# INTERNAL AUDIT PRIORITIES

 Increased audit priority compared to prior year
  Decreased audit priority compared to prior year

### How to Interpret the Graph

**Orange** text indicates an increase of 4 percentage points or more compared to the prior year. The **orange** and **blue** bars show the difference in ratings from 2025 to 2026. The column labeled “change” shows the percentage point difference from 2025 to 2026.

Note: Risk in Focus survey conducted online worldwide from March 2 to May 6, 2026. n = 232 for North America.

# INTERNAL AUDIT PRIORITIES

## Human capital and organizational culture

Human capital has consistently ranked low as an audit priority compared to risk level. While 45% of survey respondents listed it as a Top 5 risk, only 20% listed it as Top 5 for audit priority. The notable exception is public sector, where 44% listed human capital as a Top 5 audit priority (Exhibits 2.1 and 2.3).

Michael Callino, vice president of internal audit and automation at UPS, identified human capital as a risk area that should not be overlooked, particularly considering the influence of AI on strategic decisions on human capital. He described a trend where organizations are citing AI to justify job cuts, something referred to as “AI washing” by economists and media.

“You’re seeing a lot of companies who make these decisions walking back on some of their cultural foundational elements,” he said. “I think it’s where the world is heading, and I think it’s unfortunate.”

Callino argues that the long-term impact on human capital risk can be significant for individual organizations because deteriorating culture could lead to talent flight. “If your culture starts to diminish, I think it has a bigger effect on the broader risk portfolio,” he said.

## Fraud

The increase in fraud risk ranking in the past four years has seen a commensurate increase in audit effort. Since 2023, the percentage of survey respondents identifying fraud as a Top 5 area for audit effort has increased from 26% to 35% (Exhibit 2.2). This may reflect previously cited concerns about AI’s influence on fraud, as well as increasing pressure from federal regulators.

## High effort toward compliance areas

Audit priority rankings for regulatory change (54%) and governance/corporate reporting (48%) reflect the profession’s legacy orientation toward compliance auditing. Indeed, the difference between risk rankings and audit priorities was most stark for governance/corporate reporting. Just 14% of North American survey respondents ranked it as a Top 5 risk; yet 48% listed it as a top audit priority (Exhibit 2.1).

Richard Chambers, senior advisor for risk and audit at Optro (formerly AuditBoard), expressed concern over the heavy emphasis on regulatory change and corporate reporting in North American audit priorities. “We just cannot give up our quest to be compliance auditors,” he said.

However, Chambers said agentic AI is poised to absorb much of the routine compliance and transaction-testing work that currently consumes much of internal audit’s time and effort. “They are going to be able to identify the risks, select your samples, test them, identify the anomalies, and generate the audit results,” he said. He stressed this change is an inevitable efficiency shift, not a distant possibility.

**Human capital** has consistently rated lower for audit priority (20%) than risk (45%), with the effects of AI adding another layer of dimension to the risk.

# INTERNAL AUDIT PRIORITIES

## Exhibit 2.3. North America – Top 5 Audit Priorities per Sector

**Survey question:** What are the Top 5 audit areas on which internal audit spends the most time and effort? (Choose 5.)

| Audit areas                            | All North America | Financial services | Publicly traded | Privately held | Public sector | Nonprofit |
|----------------------------------------|-------------------|--------------------|-----------------|----------------|---------------|-----------|
| Cybersecurity                          | 84%               | 92%                | 93%             | 67%            | 73%           | 89%       |
| Regulatory change                      | 54%               | 66%                | 42%             | 38%            | 60%           | 61%       |
| Digital disruption (including AI)      | 53%               | 58%                | 64%             | 46%            | 25%           | 83%       |
| Business resilience                    | 51%               | 59%                | 46%             | 38%            | 54%           | 39%       |
| Governance/corporate reporting         | 48%               | 56%                | 54%             | 38%            | 44%           | 28%       |
| Financial/liquidity                    | 46%               | 52%                | 31%             | 46%            | 50%           | 61%       |
| Fraud                                  | 35%               | 38%                | 36%             | 33%            | 38%           | 22%       |
| Supply chain and outsourcing           | 34%               | 21%                | 51%             | 71%            | 21%           | 17%       |
| Human capital                          | 20%               | 11%                | 12%             | 25%            | 44%           | 6%        |
| Health/safety                          | 17%               | 3%                 | 20%             | 21%            | 29%           | 22%       |
| Communications/reputation              | 14%               | 13%                | 0%              | 8%             | 33%           | 11%       |
| Mergers/acquisitions                   | 11%               | 7%                 | 20%             | 29%            | 0%            | 6%        |
| Market changes/competition             | 11%               | 13%                | 8%              | 8%             | 4%            | 33%       |
| Organizational culture                 | 10%               | 6%                 | 3%              | 13%            | 17%           | 22%       |

■ 5 highest audit priorities

Note 1: Ties for fifth place are highlighted in a lighter shade.

Note 2: Risk in Focus survey conducted online worldwide from March 2 to May 6, 2026. n = 232 for North America.

## A CLOSER LOOK AT AI

### Prepare Now for AI Audits

**“AI-driven risks dominate the discussions I have with audit leaders,” said Anthony Pugliese, IIA president and CEO.**

Pugliese encourages internal auditors to focus on using their existing skills and judgment to start addressing AI risk. “They tell me, ‘We just don’t have the skillsets.’ But we tell them if you just execute what you already know intuitively, you can move into auditing AI and AI governance.”

Tremblay agreed: “I do think we are overstating how hard it is to audit AI. It’s ones and zeros,” he said. “It’s a piece of software. While it feels new and novel, a good starting point is to treat it like any other piece of software, which we have been auditing for decades.”

An audit leader from Canada said that internal auditors don’t have the luxury of being neutral bystanders when it comes to establishing data governance practices related to AI. “There has to be some understanding of where the company is in that journey and really identifying it as a priority. Are we talking a hands-off approach, or is internal audit a real partner in this whole journey, advising them on a real-time basis of what controls or risks they need to look at?”

Callino stressed that auditing AI requires understanding “where it lives” in the organization. Using procurement data, vendor records and legal risk assessments, internal audit can build AI inventories, map regulatory exposure, assign risk owners, and create the foundational structure to make future auditing possible, he said.

# INTERNAL AUDIT PRIORITIES

## KEY POINTS

### Survey insights

- Cybersecurity continues to dominate audit priorities, with 84% of respondents including it as a Top 5.
- Digital disruption had the largest increase for audit priority out of all the audit areas – up 9 percentage points.
- Over a four-year period, audit priority for digital disruption more than doubled (from 25% in 2023 to 53% in 2026).
- Geopolitical uncertainty and human capital are both high for risk but low for audit priority.

### Internal audit strategies

- Leverage AI tools to absorb routine compliance and transaction-testing work.
- Monitor the impact of external risks (such as geopolitical uncertainty) on internal risk areas, including supply chain, financial/liquidity, and market changes/competition.
- Ensure AI-enhanced cybersecurity strategies include human oversight, security, and ongoing training.
- Use procurement data, vendor records, and legal risk assessments to build AI inventories.

# 3. RISK MATURITY AND COVERAGE

## Assessing Risk Governance Maturity and Audit Coverage

This year, for the first time, the Risk in Focus survey explored risk governance maturity and level of audit coverage. Of greatest concern are high-risk areas that fared poorly for both maturity and coverage – digital disruption and geopolitical uncertainty.

### Risk governance maturity

Risk governance maturity reflects the extent to which risk management is embedded, formalized, and effective across the organization, making it a critical consideration for internal auditing, according to The IIA Global Practice Guide, [Assessing the Risk Management Process](#).

Mature risk governance incorporates effective risk management practices and resilience into an organization's core strategy, culture, and daily operations. Financial/liquidity risk had the highest scores for both risk governance maturity (68%) and internal audit coverage (53%) (Exhibit 3.1).

Ideally, organizations would be able to build this level of maturity for all risks they face. However, new and emerging risks create a great challenge in this area.

### Areas with low risk governance maturity

Two high-risk areas that fared poorly for both maturity and coverage were:

- Digital disruption (23% for governance maturity, 9% for audit coverage adequacy)
- Geopolitical uncertainty (31% for governance maturity, 15% for audit coverage adequacy) (Exhibit 3.1)

In contrast, maturity and coverage were stronger for risks that are well-understood and familiar, such as financial/liquidity (68% maturity, 53% coverage) and governance/corporate reporting (50% maturity, 39% coverage).

Some higher-risk areas showed middling maturity and coverage, such as human capital (39% maturity, 21% coverage) and market changes/competition (41% maturity, 16% coverage). One well-understood risk area that fared well in governance but less so in audit coverage was cybersecurity (59% maturity, 35% coverage).

**Digital disruption** had the lowest risk governance maturity, with only **23%** of CAEs scoring it as “managed” or “optimized.”

# RISK MATURITY AND COVERAGE

## Exhibit 3.1. North America – Risk Governance Maturity vs. Internal Audit Coverage

Survey question 1: On a scale of 1 to 5, please rate the current level of risk governance maturity at your organization for each of the following risk areas.

Survey question 2: Please indicate the adequacy of internal audit's current coverage of these risk areas at your organization.

### North America – Risk Governance Maturity

### North America – Internal Audit Coverage

■ 4-Managed, 5-Optimized ■ 3-Integrated ■ 1-Initial, 2-Infrastructure

■ Full coverage ■ Partial coverage ■ Inadequate coverage

5 highest risks

Note: Risk in Focus survey conducted online worldwide from March 2 to May 6, 2026. n = 232 for North America.

# RISK MATURITY AND COVERAGE

## Concern over digital disruption maturity

Digital disruption ranked last in both risk governance maturity and audit coverage. Fewer than 1 in 4 (23%) respondents rated its governance as managed or optimized. Fewer than 1 in 10 (9%) reported full audit coverage (Exhibit 3.1). The wide gap between risk level and audit coverage is understandable, but not excusable, said Chambers.

“AI has proliferated and matured much faster than our ability to comprehend it and put the controls in place to assess the risk,” he said. “If you have a risk that is exploding and your governance over it is proceeding at a snail’s pace, then that accounts for why there’s such a gap.”

## Building AI skills

Internal audit leaders face two concurrent challenges: the ongoing struggle to build relevant AI auditing skills, and the concentration of existing audit staff experience in other areas. Many audit functions are staffed heavily toward SOX and financial controls expertise, with limited bench strength in IT, cybersecurity, and emerging technologies. To build capacity, CAEs need to upskill existing staff and/or recruit technology talent from outside internal audit and teach them audit methodology.

## Building risk governance maturity

For risks with low risk governance maturity, audit leaders may choose to shift the focus from assurance, which assesses past performance, to advisory, which focuses on the future.

Kirby suggests keeping the audit plan flexible to accommodate advisory requests throughout the year. In his previous CAE role, he tracked which audits were driven by management requests versus what was in the approved audit plan. In his last year at the job, 25% of work was management initiated, which he presented to the audit committee as a positive indicator of trust and relevance.

“When management is engaging us 25% of the time, that tells you what we’re doing is value add,” he said. “We’re establishing a good relationship across the organization, and we’re actually operating where the risk lives.”

Callino and Kirby point out that communication with management is an essential aspect of building risk governance maturity in emerging risk areas. They expressed concern that in some cases internal auditors set risk levels in isolation, creating risk scores without management input, which can lead to internal audit functions focusing on the wrong things. Ultimately, risk governance maturity is a collaborative effort.

**“If you have a risk that’s exploding and your governance over it is proceeding at a snail’s pace, that accounts for why there’s such a gap [between risk and audit coverage].”**

– Richard Chambers,  
senior advisor for risk  
and audit, Optro

## KEY POINTS

### Survey insights

- Of greatest concern are high-risk areas that fared poorly for both maturity and coverage – digital disruption and geopolitical uncertainty.
- Cybersecurity, while fairly high for risk governance maturity (59%) was relatively low for audit coverage (39%).
- Middling maturity was noted in other higher risk areas, including human capital and market changes/competition.
- Well-understood risks had the highest risk governance maturity and audit coverage, in particular, financial/liquidity and governance/corporate reporting.

### Internal audit strategies

- Alert management/board to areas where risk management maturity and audit coverage are low, such as digital disruption, geopolitical uncertainty, and organizational culture.
- Leave space in audit plans to provide advisory services for areas where risk governance maturity is low.
- To increase audit skills for high-risk technology areas, upskill existing audit staff and/or recruit talent from outside internal audit, and teach them audit methodology.

# APPENDIX A. METHODOLOGY

## Survey, Roundtables, and Interviews

The Internal Audit Foundation collected survey responses from March 24 to May 6, 2026, for all regions except Europe. Responses from Europe were collected by the European Institutes Research Group from March 2 to April 7, 2026.

Completed surveys were received from 3,285 internal auditors who confirmed that they were the highest-ranking internal auditor at their organizations. They represented 132 countries/locations. The survey was conducted online through contacts associated with IIA National Institutes and regional bodies. In addition, roundtables and interviews were conducted for each regional report.

The 16 risk areas used in the survey are shown below. Respondents were asked a variety of questions about risk levels, audit planning, and risk governance maturity. Their responses provide a useful view of risk related to the organizations and industries where internal auditors work, but may not fully represent all types of risks or organizations in a geographical area.

| Risk Name                              | Risk Description Used in the Survey                                                   |
|----------------------------------------|---------------------------------------------------------------------------------------|
| Business resilience                    | Business continuity, operational resilience, crisis management, and disaster response |
| Climate change/environment             | Climate change, biodiversity, and environmental sustainability                        |
| Communications/reputation              | Communications, reputation, and stakeholder relationships                             |
| Cybersecurity                          | Cybersecurity and data security                                                       |
| Digital disruption (including AI)      | Digital disruption, new technology, and AI (artificial intelligence)                  |
| Financial/liquidity                    | Financial, liquidity, and insolvency risks                                            |
| Fraud                                  | Fraud, bribery, and the criminal exploitation of disruption                           |
| Geopolitical/macroeconomic uncertainty | Macroeconomic, social, and geopolitical uncertainty                                   |
| Governance/corporate reporting         | Organizational governance and corporate reporting                                     |
| Health/safety                          | Health, safety, and security                                                          |
| Human capital                          | Human capital, diversity, and talent management and retention                         |
| Market changes/competition             | Market changes/competition and customer behavior                                      |
| Mergers/acquisitions                   | Mergers and acquisitions                                                              |
| Organizational culture                 | Organizational culture                                                                |
| Regulatory change                      | Change in laws and regulations                                                        |
| Supply chain and outsourcing           | Supply chain, outsourcing, and 'n <sup>th</sup> ' party risk                          |

# APPENDIX B. DEMOGRAPHICS

## Exhibit B.1. North America – Industries per Sector

| Publicly traded                                |     |

# APPENDIX C. GLOBAL RISK OVERVIEW

## Digital Disruption and Geopolitical Risks Rising Rapidly

**Disruption, both digital and geopolitical, defined the global risk landscape in 2026, driven by AI's pervasive impacts and rising instability fueled by wars in [Ukraine](#) and the Middle East.**

Cybersecurity maintained the number 1 position, listed as a Top 5 risk by 80% of respondents (Exhibit C.1). Compared to the prior year, cybersecurity risks rose the most for [Africa](#) (+11), [Asia Pacific](#) (+10), and the [Middle East](#) (+9).

Keeping its second place ranking from last year, digital disruption rose 10 percentage points overall, largely driven by [Asia Pacific](#) (+20) and [North America](#) (+16).

Geopolitical uncertainty risk rose from sixth to third in the global risk rankings, increasing by 10 percentage points. The most dramatic increase was for the [Middle East](#), 31 percentage points, followed by [Asia Pacific](#) (+13). Nearly half (48%) of respondents listed geopolitical uncertainty as a Top 5 risk, compared to only 30% in 2023.

Although not reaching the top of the risk ratings, it's notable that fraud risk ratings rose 6 percentage points globally.

As technology and geopolitical risks rose, they displaced business resilience (-12) and regulatory change (-9) in the risk rankings.

### Regional risks – convergence and hot spots

Across regions, the highest ranked risks are becoming more similar, creating key areas of risk convergence around technology and geopolitical uncertainty (Exhibit C.2).

Cybersecurity is the highest ranked risk for every region, and digital disruption takes second place for all but one region. Geopolitical uncertainty was in the Top 5 for all regions for the first time since the survey started four years ago, taking third place for most.

Even with risk convergence in key areas, systemic differences expose each region to unique risks (Exhibit C.1).

- **Africa:** Africa faces greater challenges with fraud (50%) and financial/liquidity (49%) compared to other global regions. Notably, risk levels rose moderately across a wide range of risk areas, as risk ratings for business resilience decreased substantially (-21).
- **Asia Pacific:** Asia Pacific rated risk levels higher than average for business resilience (43%), market changes (37%), and supply chain (33%). The region saw a significant reshuffling of risk rankings compared to the prior year.
- **Europe:** Similar to the previous year, regulatory change (40%) ranked high for the region and well above the global average (32%). Human capital risk was in the Top 5 (39%).
- **Latin America:** Latin America saw higher risk rankings for fraud (38%) compared to the global average.
- **Middle East:** Business resilience (47%) and financial/liquidity risks (42%) were higher in the Middle East.
- **North America:** Compared to the average of the regions, risk ratings for North America were higher for market changes/competition (41%), regulatory change (42%), human capital (45%), and supply chain (33%) (Exhibit C.2).

Increased risk compared to prior year Decreased risk compared to prior year

### How to Interpret the Graph

**Orange** text indicates an increase of 4 percentage points or more compared to the prior year. The **orange** and **blue** bars show the difference in ratings from 2025 to 2026. The column labeled “change” shows the percentage point difference from 2025 to 2026.

Note: Risk in Focus survey conducted online worldwide from March 2 to May 6, 2026. *n* = 3,285.

# APPENDIX D. IIA RESOURCES

The IIA offers a variety of resources to support internal auditors with risk assessment and audit planning through the Standards and Guidance department. Most of these resources are available free to IIA members worldwide, and some are also available to the public at large. To see the most recent releases, visit the [Global Guidance](#) resource page and the [Statements of Position](#) release page.
